

14th SILICON SAXONY DAY

June 18, 2019 / Conference Centre Airport Dresden

Smart Automation: The key driver for Industry 4.0

Advanced manufacturing solutions leverage automation to compete successfully in the global market. In Industry 4.0 manufacturing scenarios, automation is a key driver of productivity improvements and can be considered a critical component of hardware and software-driven optimizations throughout the value chain.

The semiconductor industry has always been a proactive front-runner when it comes to automation. Maintaining this position requires ongoing activities to further develop and implement solutions specific to the industry and to adopt solutions developed by other industries or driven by Industry 4.0 initiatives.

The automation expert session will address modern aspects and recent developments of Industry 4.0 and automation in the industry.

EXPERT SESSION

SESSION CHAIR

DR. MICHAEL ARNOLD
